1 WHAT IS CLAIMED IS:

- 1. A product comprising a substrate to which is chemically bonded a monolayer of silicon atoms which are connected to other silicon atoms in said monolayer 5 through oxygen atoms in said monolayer, wherein the monolayer is substituted with first and second hydrocarbyl substituents and each of the silicon atoms in said monolayer is substituted with said first hydrocarbyl substituent or said second hydrocarbyl substituent is longer than said second hydrocarbyl substituent.
 - 2. The product of Claim 1 wherein said first and second hydrocarbyl substituents are distributed essentially uniformly on said substrate.
- The product of Claim 1 wherein said first 15 hydrocarbyl substituent is selected from the group consisting of phenyl, alkyl containing 1 to 60 carbon atoms, monounsaturated alkylene containing 2 to 60 carbon atoms, epoxide, and derivatives of alkyl or 20 monounsaturated alkylene which contain a total of up to 60 carbon atoms and which contain one or more hetero linkages selected from the group consisting of -O-, -N(R)-, -S-, -C(O)-, $-SO_2$ -, -C(O)O-, -OC(O)-, -C(O)N(R)-, or -N(R)C(O)-; wherein the phenyl, alkyl, 25 and alkylene are optionally substituted with one or more substituents selected from the group consisting of hydroxyl, halogen, cyano, nitro, -COOH, -SO3H, -N(R)(R), straight or branched alkyl containing 1 to 6 carbon atoms, and $-R^{1}Si(R^{2})_{3-n}(OH)_{n}$ wherein n is 1, 2 or 3, R^{1}
- 30 and R² are alkyl, alkoxy or alkylene containing up to 6 carbon atoms, and R in each occurrence is hydrogen or alkyl containing 1 to 6 carbon atoms.

- 4. The product of Claim 1 wherein said second hydrocarbyl substituent is selected from the group consisting of phenyl, alkyl containing 1 to 60 carbon atoms, monounsaturated alkylene containing 2 to
- 5 60 carbon atoms, epoxide, and derivatives of alkyl or monounsaturated alkylene which contain a total of up to 60 carbon atoms and which contain one or more hetero linkages selected from the group consisting of -O-, -N(R)-, -S-, -C(O)-, -SO₂-, -C(O)O-, -OC(O)-,
- 10 -C(O)N(R)-, and -N(R)C(O)-; wherein the phenyl, alkyl and alkylene are optionally substituted with one or more substituents selected from the group consisting of hydroxyl, halogen, cyano, nitro, -COOH, -SO₃H, -N(R)(R), straight or branched alkyl containing 1 to 6 carbon
- atoms, and $-R^1Si(R^2)_{3-n}(OH)_n$ wherein n is 1, 2 or 3, R^1 and R^2 are alkyl, alkoxy or alkylene containing up to 6 carbon atoms, and R in each occurrence is hydrogen or alkyl containing 1 to 6 carbon atoms.
- 5. The product of Claim 1 wherein the mole 20 ratio of said first hydrocarbyl substituent to said second hydrocarbyl substituent on said substrate is 100:1 to 1:100.
- 6. A product according to Claim 1 wherein the surface of said substrate comprises an inorganic element or an oxide thereof, which is capable of forming a bond to silicon atoms in said monolayer.
- 7. A product according to Claim 6 wherein said inorganic element is selected from the group consisting of Si, Al, Zr, P. Be, Mg, Ti, Al, V, Cr, Mn, 30 Fe, Co, Ni, Cu, Zn, Ga, Ge, As, Rb, Sr, Y, Nb, Mo, Ru, Rh, Pt, Au, Ag, Tl, Pb and Bi.

A product according to Claim & wherein the surface of said substrate comprises Al.

A product according to Claim & wherein the surface of said substrate comprises Be.,

MA product according to Claim wherein the surface of said substrate comprises Ti.

1.1. A product according to Claim & wherein the surface of said substrate comprises Zr. q

170 A product according to Claim 11 wherein 10 said first hydrocarbyl substituent has the formula HOCH₂-CH(OH)CH₂-.

A product according to Claim 1 wherein said substrate is bonded to the silicon atoms in said monolayer through oxygen atoms.

- 14. A product according to Claim 1 comprising silica get to which is chemically bonded a protective monolayer of silicon atoms which are connected to other silicon atoms in said monolayer through oxygen atoms in said monolayer, wherein the monolayer is substituted with first and second hydrocarbyl substituents and each of the silicon atoms in said monolayer is substituted with said first hydrocarbyl substituent or said second hydrocarbyl substituent, wherein said first hydrocarbyl substituent is longer than said second hydrocarbyl substituent.
 - 15. The product of Claim 14 wherein said first and second hydrocarbyl substituents are distributed essentially uniformly on said substrate.
- 16. The product of Claim 14 wherein said 30 first hydrocarbyl substituent is selected from the group consisting of phenyl, alkyl containing 1 to 60 carbon atoms, monounsaturated alkylene containing 2 to 60

B

1 carbon atoms, epoxide, and derivatives of alkyl or monounsaturated alkylene which contain a total of up to 60 carbon atoms and which contain one or more hetero linkages selected from the group of consisting of -O-, 5 -N(R)-, -S-, -C(O)-, -SO₂-, -C(O)O-, -OC(O)-, -C(O)N(R)-, and -N(R)C(O)-; wherein the phenyl, alkyl and alkylene are optionally substituted with one or more substituents selected from the group consisting of hydroxyl, halogen, cyano, nitro, -COOH, -SO₃H, -N(R)(R), straight or branched alkyl containing 1 to 6 carbon atoms, and -R¹Si(R²)_{3-n}(OH)_n wherein n is 1, 2 or 3, R¹ and R² are alkyl, alkoxy or alkylene containing up to 6 carbon atoms, and R in each occurrence is hydrogen or alkyl containing 1 to 6 carbon atoms.

17. The product of Claim 14 wherein said 15 first hydrocarbyl substituent is selected from the group consisting of phenyl alkyl containing 1 to 60 carbon atoms, monounsaturated alkylene containing 2 to 60 carbon atoms, epoxide, and derivatives of alkyl or 20 monounsaturated alkylene containing a total of up to 60 carbon atoms and which contain one or more hetero linkages selected from the group of consisting of -O-, -N(R)-, -S-, -C(O)-, $-SO_2-$, -C(O)O-, -OC(O)-, -C(O)N(R)-, and -N(R)C(O)-; wherein the phenyl, alkyl 25 and alkylene are optionally substituted with one or more substituents selected from the group consisting of hydroxyl, halogen, cyano, nitro, -COOH, -SO3H, -N(R)(R), straight or branched alkyl containing \(\frac{1}{2} \) to 6 carbon atoms, and $-R^1Si(R^2)_{3-n}(OH)_n$ wherein n $1 \le 1$, 2 or 3, R^1 30 and R2 are alkyl, alkoxy or alkylene containing up to 6 carbon atoms, and R in each occurrence is hydrogen or alkyl containing 1 to 6 carbon atoms.

- 18. The product of Claim 14 wherein the mole ratio of said first hydrocarbyl substituent to said second hydrocarbyl substituent on said substrate is 100:1 to 1:100.
- 19. The product of Claim 14 wherein said first hydrocarbyl substituent contains 2 to 24 carbon atoms.
- 20 The product of Claim 14 wherein said second hydrocarbyl substituent contains 1 to 6 carbon 10 atoms.
 - 21. The product of Claim 14 wherein said first hydrocarbyl substituent is octadecyl and said second hydrocarbyl substituent is propyl.
- 22. The product of Claim 14 wherein said 15 first hydrocarbyl substituent is octadecyl and said second hydrocarbyl substituent is methyl.
 - 23. The product of Claim 14 wherein said first hydrocarbyl substituent is octyl and said second hydrocarbyl substituent is methyl.
- 24. The product of Claim 14 wherein said first hydrocarbyl substituent is butyl and said second hydrocarbyl substituent is methyl.
- 25. The product of Claim 14 wherein said first hydrocarbyl substituent occupies about 20 to about 25 50% of the surface of said substitute.
 - 26. The product of Claim 14 wherein the mole ratio of said first hydrocarbyl substituent to said second hydrocarbyl substituent is about 1:1 to about 1:4.
- 30 21. In the method of chromatographically separating a mixture of substances using a chromato-

- 1 graphic material, the improvement wherein said material is a product according to Claim .
- 28. In the method of chromatographically separating a mixture of substances using a chromatographic material, the improvement wherein said material is a product according to Claim 7.
- 29 In the method of chromatographically separating a mixture of substances using a chromatographic material, the improvement wherein said material 10 is a product according to Claim 14.
 - 30. In the method of chromatographically separating a mixture of substances using a chromatographic material, the improvement wherein said material is a product according to Claim 15.
- 31. In the method of chromatographically separating a mixture of substances using a chromatographic material, the improvement wherein said material is a product according to Claim 16.
- 32. In the method of chromatographically 20 separating a mixture of substances using a chromatographic material, the improvement wherein said material is a product according to Claim 17.
- 33. In the method of chromatographically separating a mixture of substances using a chromatographic material, the improvement wherein said material is a product according to Claim 18.
- 34. In the method of chromatographically separating a mixture of substances using a chromatographic material, the improvement wherein said material 30 is a product according to Claim 19.
 - 35. In the method of chromatographically separating a mixture of substances using a chromato-

B

- 1 graphic material, the improvement wherein said material is a product according to Claim 20.
- 36. In the method of chromatographically separating a mixture of substances using a chromatographic material, the improvement wherein said material is a product according to Claim 21.
- 37. In the method of chromatographically separating a mixture of substances using a chromatographic material, the improvement wherein said material 10 is a product according to Claim 25.
 - 38. In the method of chromatographically separating a mixture of substances using a chromatographic material, the improvement wherein said material is a product according to Claim 26.
- a glass surface to which is chemically bonded a protective monolayer of silicon atoms which are connected to other silicon atoms in said monolayer through oxygen atoms in said monolayer, wherein the monolayer is substituted with first and second hydrocarbyl substituents and each of the silicon atoms in said monolayer is substituted with a first hydrocarbyl substituent or a second hydrocarbyl substituent or a second hydrocarbyl substituent is longer than said second hydrocarbyl substituent.
 - 40. The product of Claim 39 wherein said first and second hydrocarbyl substituents are distributed essentially uniformly on said substrate.
- 41. The product of Claim 39 wherein said 30 first hydrocarbyl substituent is selected from the group consisting of phenyl, alkyl containing 1 to 60 carbon atoms, monounsaturated alkylene containing 2 to 60

- 1 carbon atoms, epoxide, and derivatives of alkyl or monounsaturated alkylene which contain a total of up to 60 carbon atoms and which contain one or more hetero linkages selected from the group of consisting of -O-, 5 -N(R)- -S-, -C(O)-, -SO₂-, -C(O)O-, -OC(O)-,
- -C(O)N(R)-, and -N(R)C(O)-; wherein the phenyl, alkyl and alkylene are optionally substituted with one or more substituents selected from the group consisting of hydroxyl, halogen, cyano, nitro, -COOH, -SO₃H, -N(R)(R),
- 10 straight or branched alkyl containing 1 to 6 carbon atoms, and $-R^1Si(R^2)_{3-n}(OH)_n$ wherein n is 1, 2 or 3, R^1 and R^2 are alkyl, alkoxy or alkylene containing up to 6 carbon atoms, and R in each occurrence is hydrogen or alkyl containing 1 to 6 carbon atoms.
- 15 42. The product of Claim 39 wherein said second hydrocarbyl substituent is selected from the group consisting of phenyl, alkyl containing 1 to 60 carbon atoms, monounsaturated alkylene containing 2 to 60 carbon atoms, epoxide, and derivatives of alkyl or
- 20 monounsaturated alkylene containing a total of up to 60 carbon atoms and which contain one or more hetero linkages selected from the group of consisting of -O-, -N(R)-, -S-, -C(O)-, -SO₂-, -C(O)O-, -OC(O)-, -C(O)N(R)-, and -N(R)C(O)-; wherein the phenyl, alkyl
- and alkylene are optionally substituted with one or more substituents selected from the group consisting of hydroxyl, halogen, cyano, nitro, -COOH, -SO₃H, -N(R)(R), straight or branched alkyl containing 1 to 6 carbon atoms, and -R¹Si(R²)_{3-n}(OH)_n wherein n is 1, 2 or 3, R¹
- 30 and R² are alkyl, alkoxy or alkylene containing up to 6 carbon atoms, and R in each occurrence is hydrogen or alkyl containing 1 to 6 carbon atoms.

- 1 43. The product of Claim 39 wherein the mole ratio of said first hydrocarbyl substituent to said second hydrocarbyl substituent on said substrate is 100:1 to 1:100.
- first hydrocarbyl substituent contains 2 to 24 carbon
- 45. The product of Claim 39 wherein said second hydrocarbyl substituent contains 1 to 6 carbon 10 atoms.
 - 46. The product of Claim 39 wherein said first hydrocarbyl substituent is octadecyl and said second hydrocarbyl substituent is propyl.
- 47. The product of Claim 39 wherein said
 15 first hydrocarbyl substituent occupies about 20 to about
 50% of the surface of said substrate.
 - 48. The product of Claim 39 wherein the mole ratio of said first hydrocarbyl substituent to said second hydrocarbyl substituent is about 1:1 to about

20 1:4.

resistant to chemical and mechanical degradation which comprises forming on said surface a protective monolayer of silicon atoms which are connected to other silicon atoms in said monolayer through oxygen atoms in said monolayer, wherein the monolayer is substituted with first and second hydrocarbyl substituents and each of the silicon atoms in said monolayer is substituted with a first hydrocarbyl substituent or a second hydrocarbyl substituent, wherein said first hydrocarbyl substituent is longer than said second hydrocarbyl substituent.

Ph 3 25

The method of Claim 49 wherein said first 1 hydrocarbyl substituent is selected from the group consisting of phenyl, alkyl containing 1 to 60 carbon atoms, monounsaturated alkylene containing 2 to 60 5 carbon atoms, epoxide, and derivatives of alkyl or monounsaturated alkylene which contain a total of up to 60 carbon atoms and which contain one or more hetero linkages selected from the group consisting of -O-, -N(R)-, -S-, -C(O)-, $-SO_2$ -, -C(O)O-, -OC(O)-, 10 -C(O)N(R)-, or -N(R)C(O)-; wherein the phenyl, alkyl, and alkylene are optionally substituted with one or more substituents selected from the group consisting of hydroxyl, halogen, cyano, nitro, -COOH, -SO₃H, -N(R)(R), straight or branched alkyl containing 1 to 6 carbon 15 atoms, and $-R^1Si(R^2)_{3-n}(OH)_n$ wherein n is 1, 2 or 3, R^1 and R² are alkyl, alkoxy or alkylene containing up to 6 carbon atoms, and R in each occurrence is hydrogen or alkyl containing 1 to 6 carbon atoms.,

second hydrocarbyl substituent is selected from the group consisting of phenyl, alkyl containing 1 to 60 carbon atoms, monounsaturated alkylene containing 2 to 60 carbon atoms, epoxide and derivatives of alkyl or monounsaturated alkylene which contain a total of up to 60 carbon atoms and which contain one or more hetero linkages selected from the group consisting of -O-, -N(R)-, -S-, -C(O)-, -SO₂-, -C(O)O-, -OC(O)-, -C(O)N(R)-, and -N(R)C(O)-; wherein the phenyl, alkyl and alkylene are optionally substituted with one or more substituents selected from the group consisting of hydroxyl, halogen, cyano, nitro, -COOH, -SO₃H, -N(R)(R), straight or branched alkyl containing 1 to 6 carbon

- 1 atoms, and $-R^1Si(R^2)_{3-n}(OH)_n$ wherein n is 1, 2 or 3, R^1 and R^2 are alkyl, alkoxy or alkylene containing up to 6 carbon atoms, and R in each occurrence is hydrogen or alkyl containing 1 to 6 carbon atoms.
- 52. The method according to Claim 49 wherein material having a glass surface is rendered resistant to chemical and mechanical degradation of said surface.
- 53. The method of Claim 52 wherein said first hydrocarbyl substituent is selected from the group consisting of phenyl, alkyl containing 1 to 60 carbon atoms, monounsaturated alkylene containing 2 to 60 carbon atoms, epoxide, and derivatives of alkyl or monounsaturated alkylene which contain a total of up to 60 carbon atoms and which contain one or more hetero
- linkages selected from the group consisting of -O-, -N(R)-, -S-, -C(O)-, $-SO_2$ -, -C(O)O-, -OC(O)-, -C(O)N(R)-, or -N(R)C(O)-; wherein the phenyl, alkyl, and alkylene are optionally substituted with one or more substituents selected from the group consisting of
- 20 hydroxyl, halogen, cyano, nitro, -COOH, -SO₃H, -N(R)(R), straight or branched alkyl containing 1 to 6 carbon atoms, and -R¹Si(R²)_{3-n}(OH)_n wherein n is 1, 2 or 3, R¹ and R² are alkyl, alkoxy or alkylene containing up to 6 carbon atoms, and R in each occurrence is hydrogen or alkyl containing 1 to 6 carbon atoms.
- 54. The method of Claim 52 wherein said second hydrocarbyl substituent is selected from the group consisting of phenyl, alkyl containing 1 to 60 carbon atoms, monounsaturated alkylene containing 2 to 60 carbon atoms, epoxide, and derivatives of alkyl or monounsaturated alkylene which contain a total of up to

1 60 carbon atoms and which contain one or more hetero linkages selected from the group consisting of -O-, -N(R)-, -S-, -C(O)-, -SO₂-, -C(O)O-, -OC(O)-, -C(O)N(R)-, and -N(R)C(O)-; wherein the phenyl, alkyl 5 and alkylene are optionally substituted with one or more substituents selected from the group consisting of hydroxyl, halogen, cyano, nitro, -COOH, -SO₃H, -N(R)(R), straight or branched alkyl containing 1 to 6 carbon atoms, and -R'Si(R²)_{3-n}(OH)_n wherein n is 1, 2 or 3, R¹ and R² are alkyl, alkoxy or alkylene containing up to 6 carbon atoms, and R in each occurrence is hydrogen or alkyl containing 1 to 6 carbon atoms.

55. The method of Claim 52 wherein said material is selected from the group consisting of 15 glassware, optical fiber, and capillaries.

56. The method of Claim 55 wherein said material is a fiber optic filament.

57. The method of Claim 49 wherein material having a silica gel surface is rendered resistant to chemical and physical degradation of said surface.

58. The method of Claim 57 wherein said first hydrocarbyl substituent is selected from the group consisting of phenyl, alkyl containing 1 to 60 carbon atoms, monounsaturated alkylene containing 2 to 60 carbon atoms, epoxide and derivatives of alkyl or monounsaturated alkylene which contain a total of up to 60 carbon atoms and which contain one or more hetero linkages selected from the group consisting of -O-,

 $_{30}$ -C(O)N(R)-, or -N(R)C(O)-; wherein the phenyl, alkyl, and alkylene are optionally substituted with one or more substituents selected from the group consisting of

-N(R)-, -S-, -C(O)-, $-SO_2$ -, -C(O)O-, -OC(O)-

- 1 hydroxyl, halogen, cyano, nitro, -COOH, -SO₃H, -N(R)(R), straight or branched alkyl containing 1 to 6 carbon atoms, and -R¹Si(R²)_{3-n}(OH)_n wherein n is 1, 2 or 3, R¹ and R² are alkyl, alkoxy or alkylene containing up to 6 carbon atoms, and R in each occurrence is hydrogen or alkyl containing 1 to 6 carbon atoms, and R in each occurrence is hydrogen or alkyl containing 1 to 6 carbon atoms.
- The method of Claim 57 wherein said 59. 10 second hydrocarbyl substituent is selected from the group consisting of phenyl, alkyl containing 1 to 60 carbon atoms, monounsaturated alkylene containing 2 to 60 carbon atoms, epoxide χ and derivatives of alkyl or monounsaturated alkylene which contain a total of up to 15 60 carbon atoms and which contain one or more hetero linkages selected from the group consisting of -O-, -N(R)-, -S-, -C(O)-, $-SO_2$ -, -C(O)-, -OC(O)-, -C(O)N(R)-, and -N(R)C(O)-; where in the phenyl, alkyl and alkylene are optionally substituted with one or more 20 substituents selected from the group consisting of hydroxyl, halogen, cyano, nitro, -COOH, -SO3H, -N(R)(R), straight or branched alkyl containing 1 to 6 carbon atoms, and $-R^1Si(R^2)_{3-n}(OH)_n$ wherein n is \hat{I}_{χ} 2 or 3, R^1 and R² are alkyl, alkoxy or alkylene containing up to 6 25 carbon atoms, and R in each occurrence is hydrogen or alkyl containing 1 to 6 carbon atoms.
- 60. A method for treating the surface of an article comprising contacting said surface with silanes of the formula R¹SiX₃ and R²SiX₃, wherein R¹ and R² are hydrocarbyl substituents and X is a leaving group, provided that R¹ is longer than R², under conditions whereunder said silanes react at said surface and form a

puly

Control Control

monolayer of silicon atoms chemically bonded to said surface which silicon atoms are connected to other silicon atoms in said monolayer through oxygen atoms in said monolayer, wherein each of said silicon atoms in said monolayer is substituted with R¹ or R².

62/7 The method according to Claim 60 which comprises contacting said surface with said silanes in a solution of said silanes.

52/8 The method according to Claim 60 which 10 comprises contacting said surface of said article with a gas comprising said silanes.

52.19 A method according to Claim 62 wherein said article is a fiber optic filament, the method comprising drawing said filament through said gas under conditions whereunder said silanes react with the surface of said filament.

- 64. A method for treating a surface comprising silicon and oxygen atoms, said surface comprising hydroxyl substituents, to remove said hydroxyl substituents, comprising:
 - (a) converting said hydroxyl substituents to halide substituents, and then

 (b) converting said halide substituents
 - to alkyl groups containing 1 to 6 carbon atoms.
- 25 65. The method of Claim 64 wherein said halide is chloride.
- 66. The method of Claim 65 wherein said hydroxyl substituents are converted to chloride by reacting said hydroxyl substituents with thionyl chloride.

1 67 The method of Claim 66 wherein said chloride is converted to alkyl groups by reacting the product of step (a) with a Grignard reagent.

68. The method of Claim 67 wherein said 5 Grignard reagent has the formula (Alk)MgBr wherein Alk signifies alkyl containing 1 to 6 carbon atoms.
